Supply Chain Management: Driving Strategic Advantage
MIT Campus • January 8th, 2015

better logistics for cities.

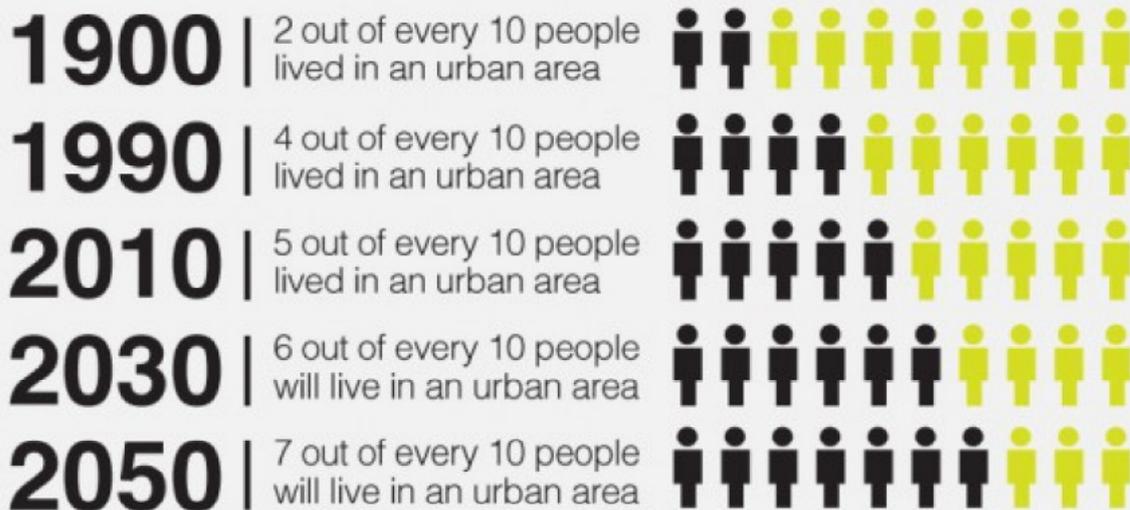

urban channel strategy
excellence in last-mile operations
high-resolution urban logistics design

better cities for logistics.

data-driven policy making
innovation in urban freight planning

THE RISE OF THE MEGACITY

Urbanization

Source: WHO, 2012. Urban area defined 100,000 or more inhabitants.
Infographic Source: http://catalystreview.net/wp-content/uploads/2012/09/infographic_urbanization.jpg

Megacities with population > 5M

1900s

(1)

London ~ 6.5M
 Osaka(?), New York ~ 4M
 Paris, Berlin ~ 3M
 Tokyo ~ 1.5

1950s

(5)

Tokyo ~ 13M
New York ~ 12M
Osaka ~ 9M
London ~ 8M
Paris, Shanghai ~ 5M

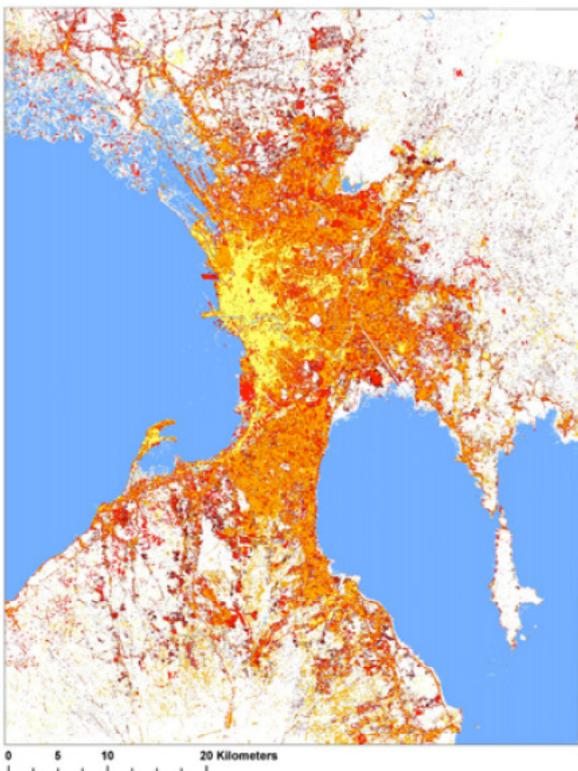

2000s

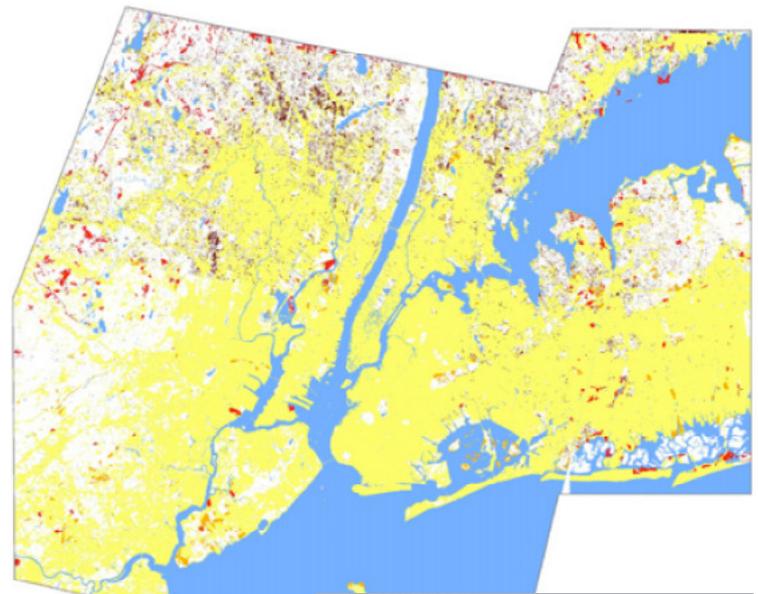

(78)

Tokyo ~ 35M
Mumbai, Mexico City ~ 20M
São Paulo, New York ~ 19M
Shanghai ~ 17M
Kolkata, Delhi ~ 16M
Beijing, London ~ 15M
LA, Buenos Aires ~ 12M
Rio, Paris, Manila ~ 11M
Moscow, Istanbul ~ 10M
.... 45 more

WHERE DO ALL THESE PEOPLE SHOP?

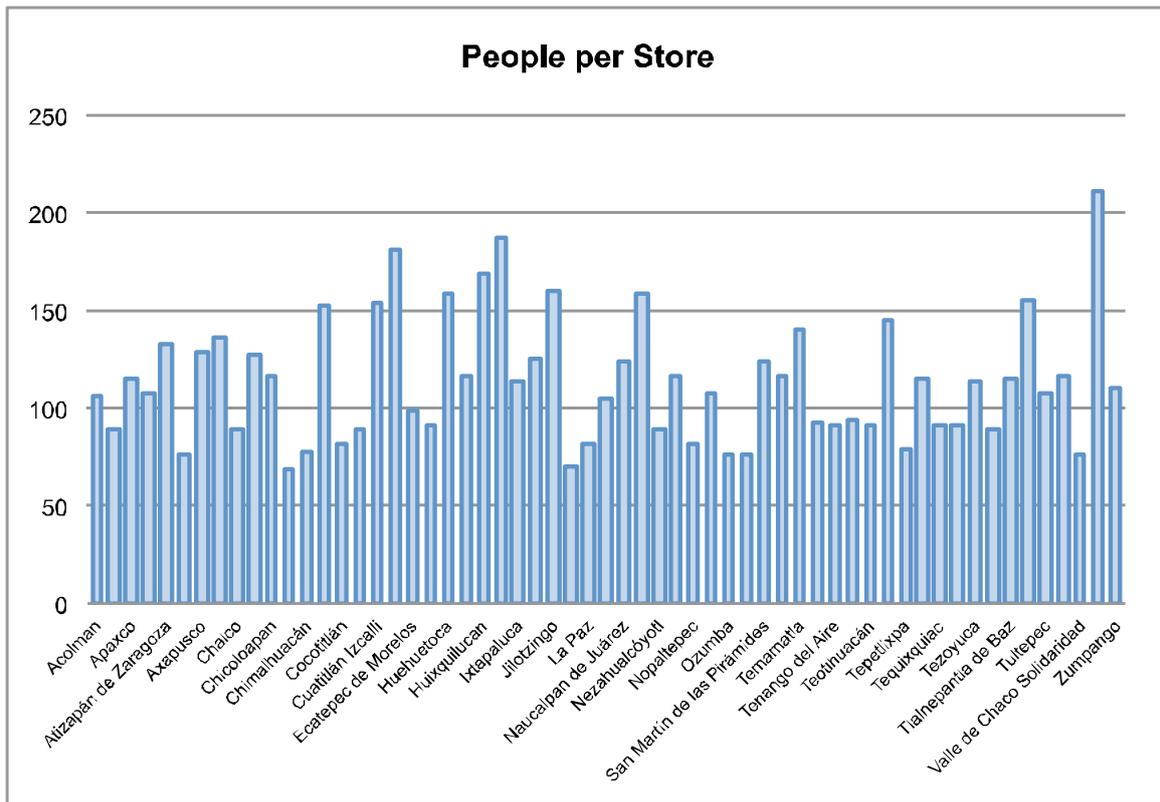

Retail dynamics in emerging market megacities

Traditional retail channel still dominant in most developing countries

Source: Nielsen, LOGyCA

Nanostores in Mexico City

Source: INEGI 2012 & S.Caballero (ITESM)

Nanostores in Mexico City

Source: INEGI 2012, MIT Megacity Lab

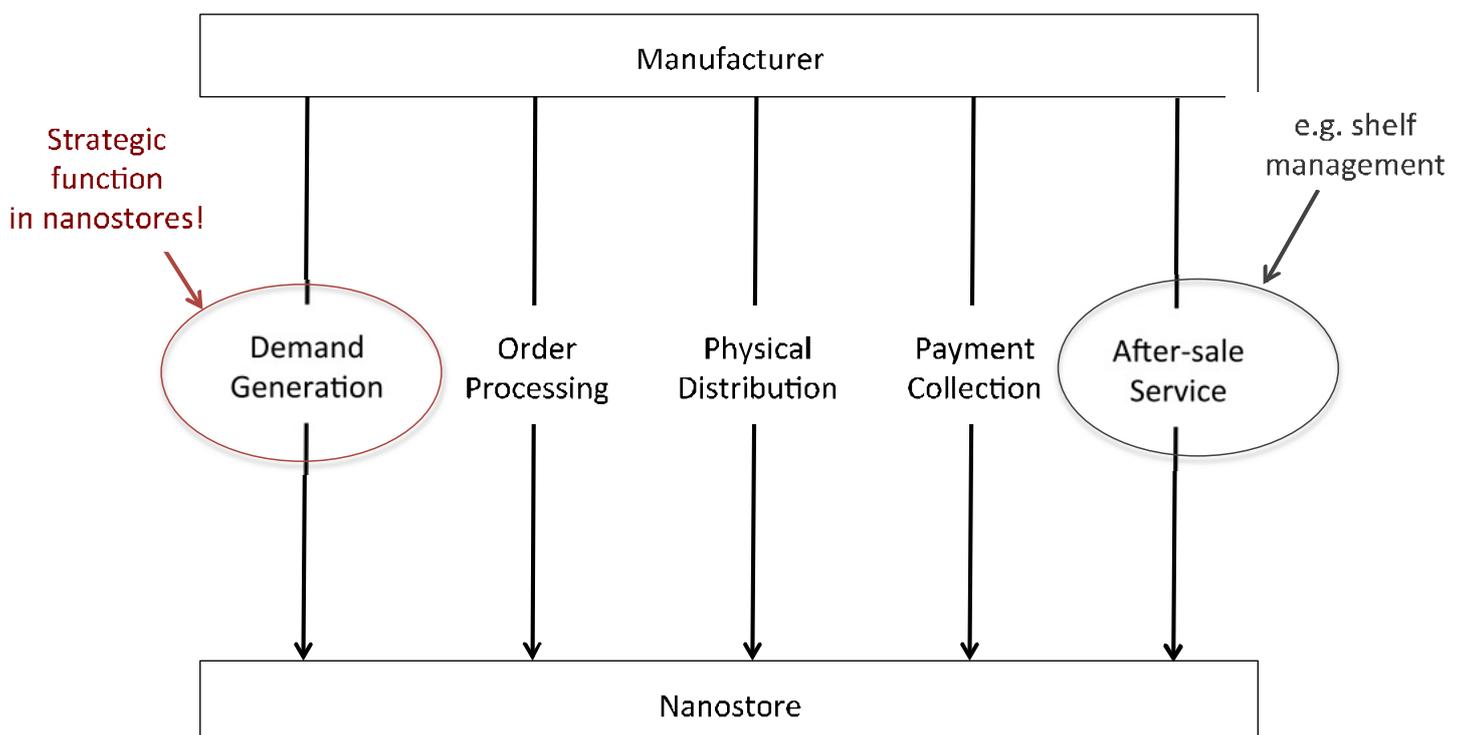

Why do nanostores survive?

- Convenience
- Limited access to transport by large part of the population
- Sales in small quantities
- Informal credit
- Low barrier of entry
- Interest of CPG manufacturers to have them survive (higher margin, growth)

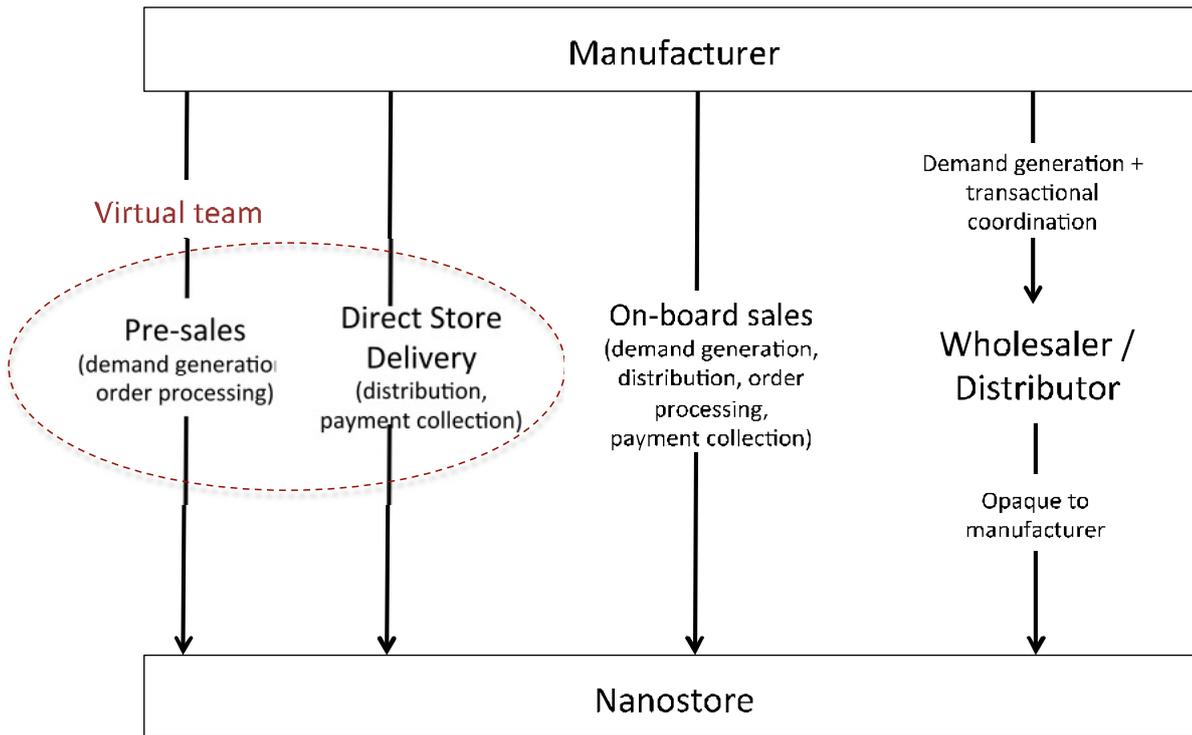

DESIGNING THE NANOSTORE SUPPLY CHAIN

	Modern Channel Supermarket	Traditional Channel Nanostore
Functions	Professionals, dispersed	Single store owner-operator, family
Logistics support	Distribution centers, cross-docks, 3PL	None
Financial flow	Formal credit, bank transfers	Cash, relationship-based credit
Line items	Full case packs to store, pallets to retailer DC	Consumer units, mixed case packs
Number of SKUs	Thousands to tens of thousands	Hundreds
Category depth	Half dozen to dozens	Single or double
Number of consumers served per store	Tens of thousands	A few hundred
Technology	Enterprise systems, POS scanning, EDI	Personal mobile phone
Marketing Strategy	Brand, advertising, central merchandising	Community, convenience, high-service

Channel Functional Decomposition

Source: Blanco & Fransoo (2012)

Source: Blanco & Fransoo (2012)

Pre-sales activity

- Customer service
- Demand generation
 - Relationship based
 - “Trust”
 - Promotions
- Order processing
- Product presentation
- Next day delivery

- LatAm: 70-90 nanostores per day

- Physical Distribution
- Payment collection
 - Order reconciliation
- Shelf management
- After-service
 - Expired/Excess/Returns
- “Conflict” resolution

- 40-90 nanostores per day

author authorization

35

On-Board/Van Sales

- Customer service
- Demand generation
- Order processing
- Physical Distribution
- Payment collection
- Shelf management
- After-service
- 30-70 nanostores per day

Ex: different strategies within a few blocks of the same urban area!

van seller

pre-seller

Which is the best design to use?

- Sales conversion rates
 - Impact on order-to-cash cycle
 - Cultural context
- Product characteristics
 - Complexity
- Productivity
 - Store density, packaging design, shelf management
- Assortment strategy
 - Number of SKUs
 - Promotional
- Competitive landscape

THE LAST-MILE REVOLUTION

customer is king

Same-Day Delivery Coverage: **East Coast & Midwest**

Boston

Find Same-Day Delivery Items in Three Easy Steps...

1 Search for items

Choose from millions of items, including electronics, home and office supplies, and baby necessities.

2 Filter your results

Use the "Get it Today" filter on the left to view and purchase items eligible for Same-Day Delivery.

3 Get it today!

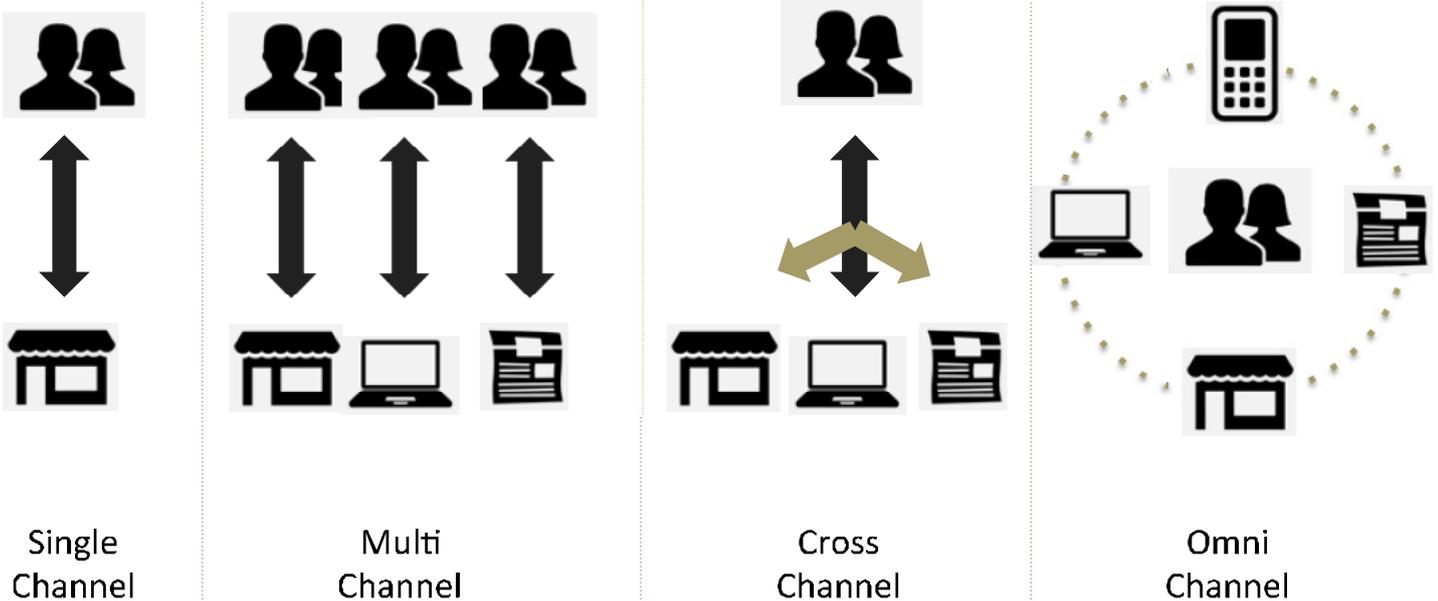

All Same-Day Delivery orders will arrive by 9PM.

Amazon Tests Bike Messengers for One-Hour Delivery in New York City

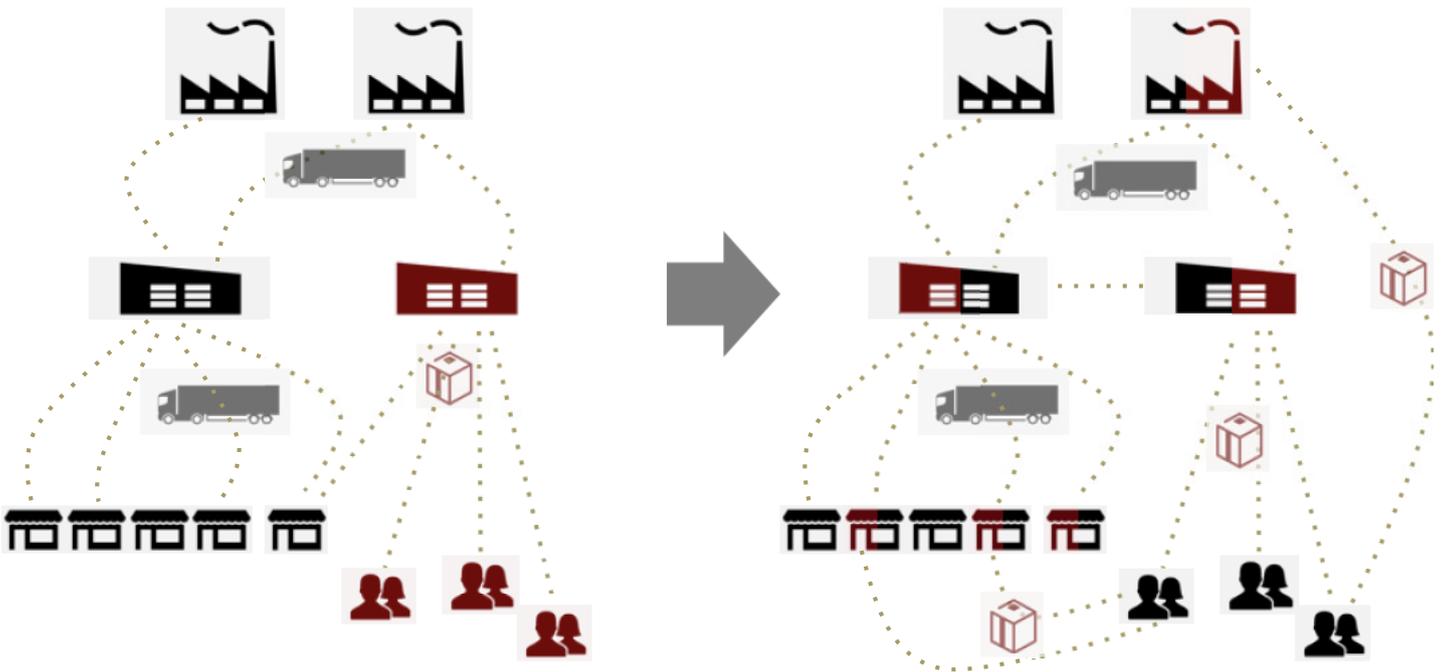

New Project Called Amazon Prime Now and Mimics Immediacy of In-Store Shopping

The service first became available in the Manhattan neighborhood where Amazon previously leased a brick-and-mortar building near the Empire State Building.

Urban Channel Strategy: Omni Channel, the retail evolution ...

... and the underlying supply chain that supports it

delivery. shortened.

Participating Stores

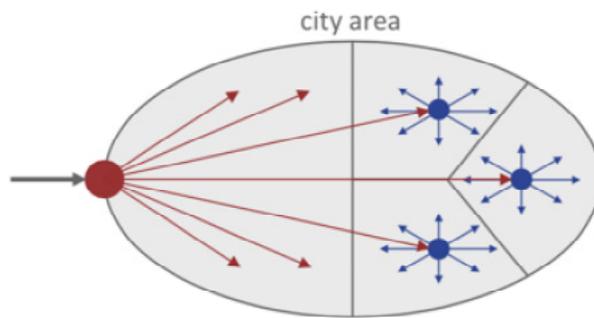

1-800flowers.com	ALSCO SEEDS	AVEDA	BANANA REPUBLIC	Blue Bird Bakery
BHINDI	BOSE	BOSSINI	Brooks Brothers	Brookstone
CACHÉ	Canvas Camera	CARLTON HAIR	catimini	Chantal Sullivan
charlotte russe	CHICO'S	Chocolate Obsession	Cabtree & Eschyl	Crate&Barrel
CMB	ecco	eCosway	EPIC Menswear	ETON
eva varro	Foot Locker	FRANCO LICOMI	FRETTE	FL
Gigoles Wines	GO GRAPHICS	GODIVA	BOSS HUGO BOSS	Green Leaf

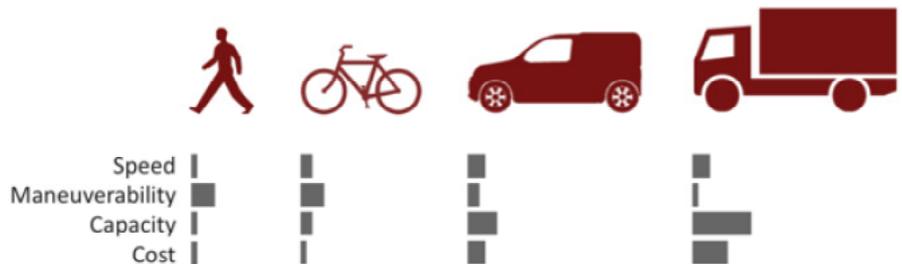

Optimization & Simulation Model Conceptual Design

Shipment Strategy Direct vs. indirect shipment

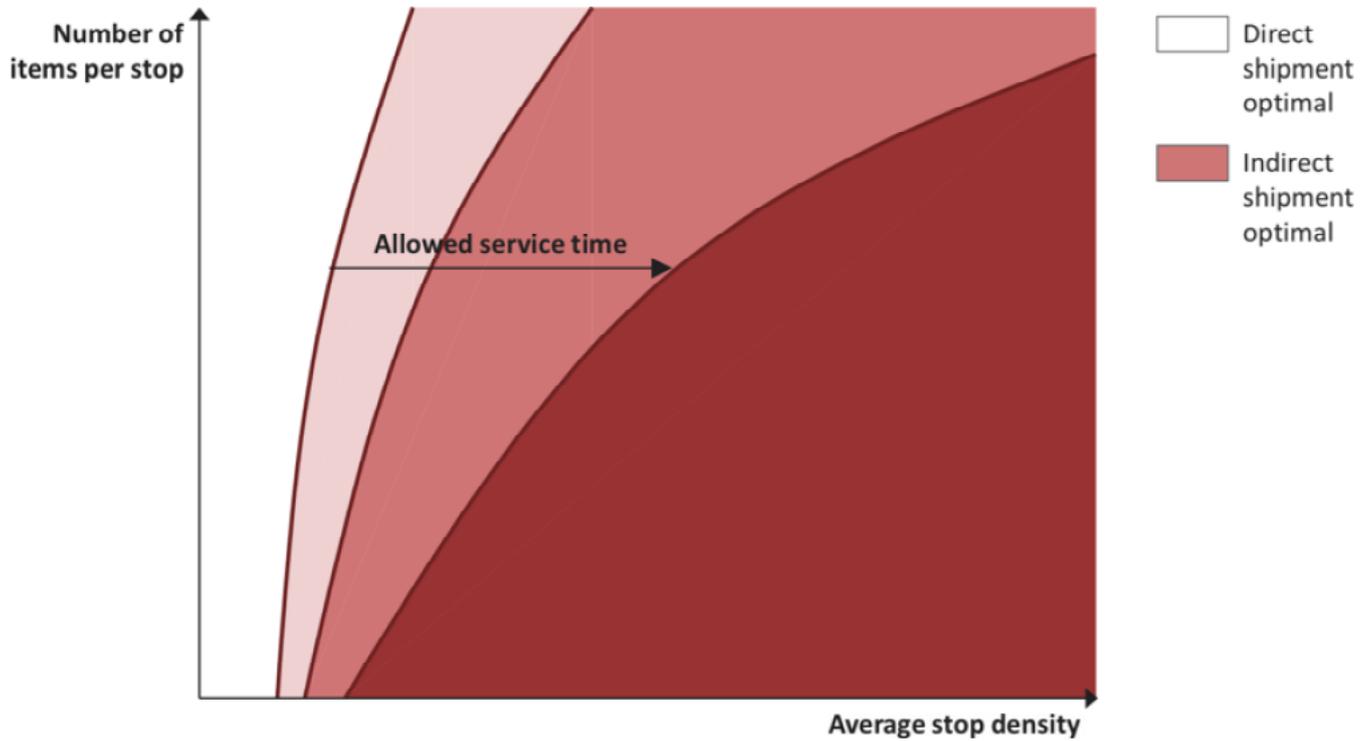

Modal Choice Various competing vehicle technologies

Quality of Service Various possible service time requirements

Note

- Analysis based on stylized city with homogeneous demand
- Only binary decision b/w direct-shipment-only and indirect-shipment-only regime allowed

THE CITY PERSPECTIVE

People vs. Boxes

The City Policy Dilemma: People vs. Boxes

Good for People

Mixed economic activity, more public transport, less vehicles

More public transport, less roads

More pedestrian, less roads

Bad for Boxes

More people, more boxes

More consolidation of logistics activities

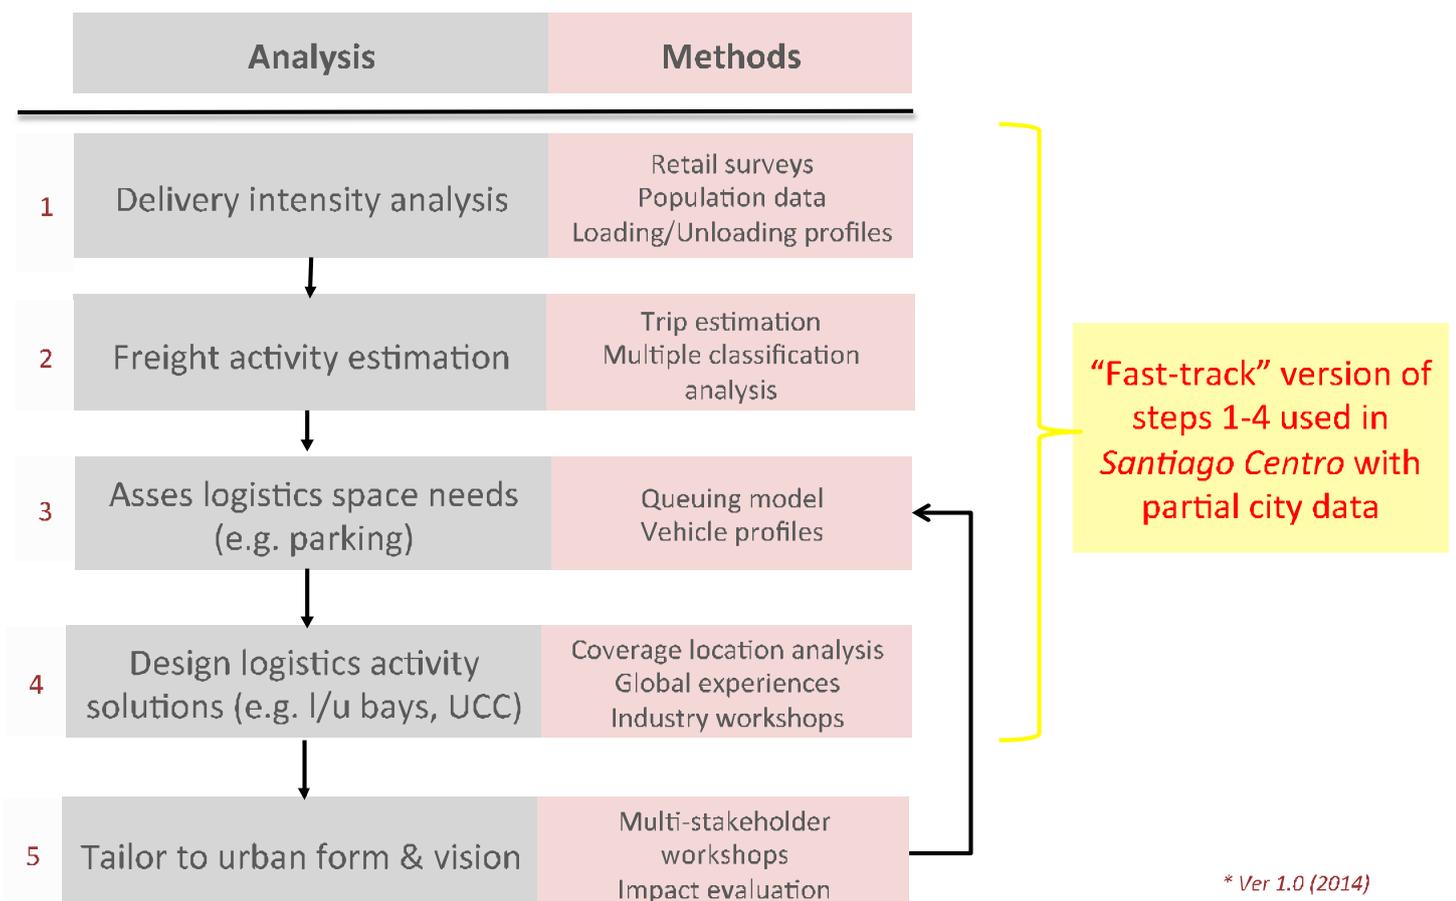

Bigger warehouses, bigger trucks of incoming products

Pushed out

Smaller trucks in, with less roads

MIT “Better Cities for Logistics” Design Methodology*

Retail Density

1,801
establishments/km²

Density of retail store with establishment sizes.
Source: MIT MegacityLab Urban Logistics Atlas 2013

Main Retail Categories

Main retail categories	# Establishments	% of Total
Food Service	316	18 %
Clothing and fashion	267	15 %
Grocery Stores	260	14 %
Drugstores & pharmacies	75	4 %

Delivery Intensity

4,000
deliveries per km²
excludes office supplies & home deliveries • projected at 7,000 for Centro Santiago area

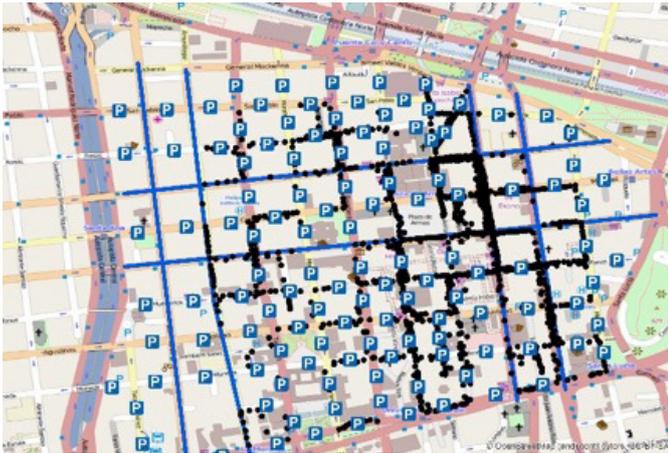

Retail delivery intensity (by category)

Location of minimum Loading/Unloading Spaces

Step 1: Locate 60 candidate locations along suitable road links or **1 I/u space per block**

Step 2: Verify walking distance constraints (150m by law). 60 I/u space can cover 100% of stores

- Restricted access
- Retail establishment
- P** Hypoththesized freight parking location

FINAL THOUGHTS

better logistics for cities.

urban channel strategy
excellence in last-mile operations
high-resolution urban logistics design

better cities for logistics.

data-driven policy making
innovation in urban freight planning

Finding delivery areas

High-resolution urban logistics design

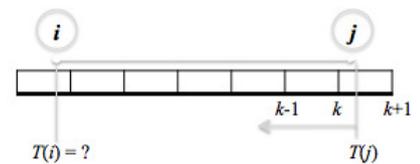

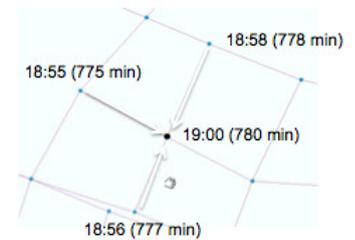

Average speed (31 Km/h) vs. Variable speed
(Min: 5 Km/h, Max: 100Km/h)

Modified Reverse Dijkstra

```

Algorithm Modified Reverse Dijkstra;
Begin
  S := ∅; U := N;
  d(i) := 0 for each node i ∈ N;
  d(o) := Arrival time and ant(o) := 0;
  while |S| < n do
  begin
    let j ∈ U* be a node for which d'(j) = max(d'(k): k ∈ U*);
    S := S ∪ {j};
    U := U - {j};
    for each (i, j) ∈ A(j) do
      if d'(i) < Dep_time(d'(j), (i, j)) then
        d'(i) := Dep_time(d'(j), (i, j)) and
        ant(i) := j;
    end;
  end;

Function Dep_time(d'(j), (i, j));
  Res_length := l(i,j);
  let k ∈ {0, 1, 2, ..., V} be an index for which f(i,j) ≤ d'(j) < f(i,j);
  Res_length := Res_length - v(i,j) × (d'(j) - f(i,j));
  while Res_length > 0 do
  begin
    k := k - 1;
    Res_length := Res_length - v(i,j) × (f(i,j) - f(i,j));
  end;
  Arr_time := f(i,j) - Res_length / v(i,j);
Return;
  
```

Closing Thoughts

- Citizens vs. Consumers
 - Logistics is the enabler of quality of life
- Know your (mega)city
 - People vs. Boxes
 - Make it a better place for logistics...
 - Collaborate to drive public policy
 - Share data
- Go nano!
 - Nanostores matter
 - High resolution data
- “Omni-channel” urban trends
 - It’s all about density & real estate

THANKS!
